## Satellite Meeting Diabetes

Euromedlab 2017  
Co-chairs

Dear Colleagues and Friends,

On behalf of the Hellenic Diabetes Association, the Greek Society of Clinical Chemistry - Clinical Biochemistry and the IFCC Committee for Education in the Use of Biomarkers in Diabetes, it gives us great pleasure to invite colleagues to the Satellite Meeting on Diabetes in conjunction with EuroMedLab 2017.

The scientific programme addresses innovations in both the laboratory and clinic. There will be four sessions.

### FIRST SESSION

The first session provides an **overview of diabetes**.

### SECOND SESSION

The second session is on **glucose**:

- the state of the art of continuous glucose meters
- the quality of glucose meters
- the patients experiences of self monitoring.

### THIRD SESSION

The third session focuses on **HbA1c**:

- the progress in quality of the assay
- the limitations that still remain
- point of care instruments
- the ongoing debate on suitability for diagnosis
- a presentation of the results of the IFCC project on monitoring HbA1c Europe-wide

### FOURTH SESSION

The last session is dedicated to **new ideas and future developments**:

- new (non) invasive methods
- advanced glycated end products
- diabetic nephropathy
- gestational diabetes

As reflected by the subtitle "Under Poseidon's Eye", the social programme is associated with ancient Greece. The congress centre is close to the famous Poseidon temple and the programme is scheduled such as that participants will experience the sunset from this historical place.

The organization committee looks forward to welcoming you in Sounio.
